## Pre-Press without the hassle!

How often have you heard the sad story about a good pre-press system causing disappointment and financial loss through lack of proper consulting, training and reliable back-up? Too often, this happens when the user's real needs are not fully understood from the beginning, and can get worse when training and after-sales service are slow or lacking. This year Hunter Penrose joined forces with an experienced technical team, Elkran International of Lagos, Nigeria, whose fast-acting and reliable field engineers have proven their worth in many installations including the entire new pre-press facility at African Union. During the past few weeks they have again refreshed their skills by attending training in USA and UK and achieved the standards required for installing and servicing the latest high-resolution B1 and B2 Highwater CTP devices as well as ECRM CTP for newspapers.

Our pan-African service now includes the complete consulting, installation, user training and after-sales support package for:

- Origination and publishing systems
- Digital workflow
- Networking
- Proofing
- CTP output – ECRM
- CTP output – Highwater
- Film output options
- Digital Printing

We believe that this offers the best and most versatile value in the market.

Members of Elkran, AU Technical Services and Hunter Penrose

### CTP Plate Chemicals

#### Hunterpress Super Gold Developer

Developer for Thermal CTP Plates. Compatible with Kodak, Agfa, Ipagsa and other Thermal CTP plates.

#### Hunterpress CTP Plate Cleaner

Formulated specially to remove ink and oxidation from all kinds of CTP plates without damaging the image area and without sensitizing the non-image area.

Both Super Gold and CTP Plate Cleaner are more economical than main manufacturers' products.

## Digital Press Breakthrough

Digital presses have taken over many of the short-run applications from conventional offset. For run lengths up to a few thousand they can provide an economic and fast way of getting the job done. In the past, the output of small digital presses was limited by the media they could handle. . . . Not now!

The **Intec CP2020PRO** from Hunter Penrose is the NEW class leading full colour multi-media, ultra heavy stock digital colour printing press. With a straight-through in line CMYK printing path, **lowest capital cost and lowest cost per copy** in its class the **CP2020PRO** sets a new bench mark in digital printing capability.

Standard Features of Intec **CP2020PRO** include:

- Multi-media Ultra Heavy Stock printing **up to 512 gsm**
- Over 2000 prints per hour
- 800MHz Processor, 40 gig hard drive, 768Mb RAM
- Genuine Adobe Postscript 3 RIP
- High capacity toners supplied with printer as standard (Black toner - 18,500 prints and Colour toner 16,500 prints)
- Lowest cost per copy in class
- Duplexer for double sided printing is included as standard
- Print on to media up to 1.2 metres long
- Sharper text, greater highlight detail and smoother vignettes
- More accurate colour with improved colour management Customised and ICC colour profiling More consistent colour reproduction & improved productivity Screened out-put function giving similar print to litho printing

## New Sealants and Coatings

Most new sheet fed presses have a coating unit; printed sheets are coated to seal and protect the surface, or to produce a special visual effect (matt, silk, or gloss) as an alternative to laminating.

As the success of our heatset gloss coating continues, we are extending the coating and sealing range in 2009.

Some printers apply a sealant or coating through the inking system, especially on older presses. Either way, the coating is applied in one pass through the press, at the same time as printing; the result is a better-looking, better-handling print.

W-3400 Water Based Neutral Sealer	Anilox / roller coater / blanket	Prevents ink setoff (less powder), allows immediate work and turn or immediate finishing. Completely rub-resistant
W-5400 Water Based Gloss Coating	Anilox / roller coater / blanket	Gloss coating for paper or board
W-1400 Water Based Matt Coating	Anilox / roller coater / blanket	Matt coating for paper or board
D-6060 Acrylic Gloss Sealer	Ink Duct	Protection and visual enhancement of surface
D-3010 Oil Based Gloss Varnish	Ink Duct	Gloss finish for paper or board

Coatings and sealants are available in choice of viscosity to suit climate conditions, and coating equipment. Special coatings are available for certain applications.

**CUT**  **COSTS!**

The sharply falling cost of the Pound Sterling has dramatically reduced the cost of sourcing from the UK. Since January 2008, the GBP is now 27% cheaper than the USD and almost 20% less than the EUR. Now's the time to review your purchasing of printing products – let us quote!

		12-07	12-08	%
<b>£1.00</b>	<b>EUR</b>	<b>1.40</b>	<b>1.13</b>	<b>-19.3%</b>
<b>£1.00</b>	<b>USD</b>	<b>1.98</b>	<b>1.47</b>	<b>-26.8%</b>
