

GOOD NEWS FOR NEWSPAPERS !

In the fight against rising material costs, two of our top products are leading the way.

K630 Coldset Web Blanket

In October we introduced K630 blankets to the newspaper industry on a trial basis. K630 was developed and initially marketed in USA and in Australia. The blanket has a special surface allowing quicker start up. K630 saves paper also by reducing web breaks and reduced piling. Following successful trials on both new and older presses, this product is now available from Hunter Penrose in 1.95 and 1.68mm with bars for all types of press, together with calibrated polyester or manilla underlays.

Hunterpress RC Web Fount

In the months since IFRA 2004 our new corrosion-inhibited web fount formula has commenced production. RC Web Fount, as well as reducing corrosion of the cylinders, gives very fast start up, saving tons of paper. RC Web Fount is available in both 200 litre and 25 litre containers.

STITCH UP THE COMPETITION !

Following the launch of our Stitching Wire range last August, we have been inundated with demand for this product and we apologise to those customers who experienced some delays in the first months. Production is now geared to meet demand and in spite of world wide increases by our competitors, we have not increased the price.

OPV VARNISH

Hunterpress OPV oil resin varnishes are proving popular with sheet fed printers looking for high gloss alternatives to UV, and needing no special coating equipment. Now available with or without added driers.

PRINTING MONEY?

Bank notes are always attractive, more so when printed by the intaglio process on Giori or Komori presses, using our CS1 Cambric Impression blankets, as used by security printing and minting departments around the world.

DENSITOMETER OFFER

Order any of the above products and qualify for special discounts on all X-RITE DENSITOMETERS! For details of this special offer in your area, fax back the enquiry form overleaf.

*To all our trading partners a peaceful, happy, successful and prosperous
New Year.*
