

PROCESS ENGRAVING ZINC - UNCOATED

Jetplate starts with the highest grade zinc and combines precision traces of aluminum and magnesium to produce a smoother etch. Thermal flattening and annealing ensures a uniform, flat character to the zinc plate, which etches "soft" yet is durable enough to stand the test of time

1mm thick zinc which is highly polished on one side. The polished surface is protected by a plastic film the new backcoat is "green" and complies with environmental standards across the globe

Jetplate Prices

500 x 1000 x 1.0mm 19 gauge

Quantity

1 – 2	£87.50	per sheet
3 – 5	£76.70	per sheet
6 – 10	£71.20	per sheet

Hydro coat Zinc is a triple-metal zinc produced with a unique annealing and thermal flattening process which helps shape grain growth to ensure that the finished plate maintains a uniform character

Hydro-coat is coated with a presensitised photo-resist which is developed with an ecologically-friendly aqueous developer

Hydrocoat Prices

500 x 1000 x 1.00mm 19 gauge

Quantity

1 - 4	£93.06	per sheet
5 - 9	£88.40	per sheet
10	£84.04	per sheet

All prices ex works. Carriage extra
